SKILLS

Frontend

- React
- Next.js
- JavaScript
- HTML/CSS

Backend

- Node.js
- Express
- MongoDB

EDUCATION

Associate Degree, Software Engineering

Currently continuing studies alongside hands-on project work.

DEVELOPER

Turning Ideas Into Clean And Functional Web Experiences

I design and build modern web applications that are fast, reliable, and built to scale. I build fast and scalable web apps with a strong focus on clean UI and performance — every decision is driven by real-world usability, not just visuals. From architecture decisions to UI details, I focus on solutions that are maintainable and aligned with real business goals.

- Remote-Friendly
- Long-Term Product Quality

What I Focus On

- Performance**
Fast-loading apps using modern optimization techniques.
- Accessibility**
Inclusive, usable interfaces for everyone.
- Code Quality**
Clean, documented, well-tested codebases.
- Code Splitting**
Reduced load times via smart bundling strategy.
- Responsive Design**
Smooth, consistent UX across every device.
- Modern Techniques**
React, Next.js and Tailwind for scalable apps.

Selected Projects

- Task Manager**
Productivity Tool
Drag-and-drop kanban board with priority labels, due dates, and collaboration features — inspired by Notion and Linear.
React Node.js MongoDB
- Chat Application**
Real-Time App
Real-time messaging app with rooms, online presence indicators, and persistent history using WebSocket pub/sub.
Node.js Express
- Portfolio v1**
Personal Website
First iteration of my personal portfolio, built with vanilla HTML/CSS animations — where the design obsession started.
HTML CSS
